

# Mark Guy Kachur

Personal Website

# Objectives

- To create a personal website to act as a sort of landing page to show who I am and what I'm currently doing
- To create said page using current technologies in an intelligent way

# Technologies Used

- Bootstrap
- JQuery
- Javascript
- HTML5
- CSS

# Proudest Of

- The Ball Pit!
- Using familiar code I know was really fun to make something work and be interesting.
- Making the circles spin through colors and display properly on the canvas was rewarding

# Hardest Part

- Probably also the ball pit
- Making the canvas work with the bootstrap theme, and really understanding how the bootstrap theme was working and what was being applied, the order of css files was really important.
- Still some errors of it, wanted so many more features for the balls.
